WITH SMARTFOAM® TECHNOLOGY

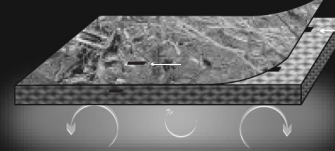

Perspiration and heat out

Cool air exchange

When Active...

Closed-cell foam

Body heat retention

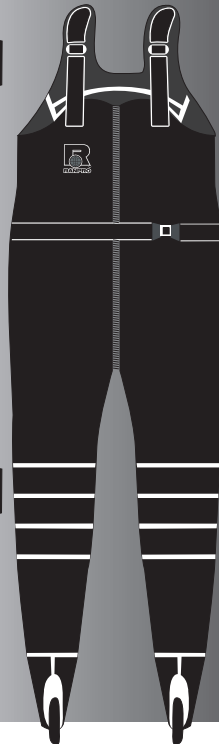

When Not Active...

SmartFoam®

Jackets

SmartFoam®

Pants

SmartFoam® Technology incorporates closed-cell foam for buoyancy in water & dynamic thermal regulation on land. This helps to keep you comfortable by allowing perspiration and heat to escape from the garment when you are active. The greater the amount of the activity, the greater the rate of perspiration and heat transfer.

Dynaflow™ garments provide:

- Dynamic Thermal Regulation
 - Dynaflow™ garments enable the wearer to experience warm insulation when they are relaxed (non-active mode). As the wearer's activity level increases (active mode), so does the garment's ability to optimize comfort by increasing the rate of evaporation and cooling
- Ergonomic 3D design
 - Articulated elbows and knees for freedom of movement and comfort
 - Bib pants have adjustable and comfortable suspenders
 - All seams are stitched as flat seam construction to ensure comfort and non-abrasion to the wearer
- Buoyancy
 - Dynaflow is made of lightweight closed-cell foam. For activities on or around water, the Dynaflow garment provides flotation protection additional to your required life jacket or personal flotation device

SFJ 0206 Dynaflow™ Hooded Jacket

- Full hood with innovative inner draw cord system
- Two front hand warmer pockets
- Articulated elbows provide freedom of movement
- Two-way zipper for easy access

SFJ 0201 Dynaflow™ Basic Jacket

- Articulated elbows provide freedom of movement
- Two-way zipper for easy access

SFP 0200 Dynaflow™ Pant

- Two-way zipper for easy access
- Adjustable elastic suspenders with padded shoulders straps
- Articulated knees provide freedom of movement
- Adjustable elastic waist belt (can be removed)
- Stretchy stirrup bottom keeps the pant leg in your boot
